

Highway 2 Median Design

from E. 96th Avenue to E. 104th Avenue

About the Project

Commerce City is redesigning and constructing medians on Highway 2 between E. 96th Avenue and E. 104th Avenue, spanning approximately one and a half miles.

We are excited to announce an open house to inform residents about the median design updates!

The project improvements for better mobility and increased safety will include:

- Rumble strips will be installed and restriping will be completed in various locations along the corridor
- Construct barriers and raised medians in various locations along the corridor to match existing aesthetics in and around the project area

Project Goals

The median design will improve mobility and enhance safety on the corridor for motorists.

Improvements will be made to medians and there will be additional safety features for pedestrians.
